The Brain Implants That Could Change Humanity.

Brains are talking to computers, and computers to brains. Are our daydreams safe?

Robert Kirsch, PhD was featured in an article in the New York Times by Moises Velasquez-Manoff, "The Brain Implants That Could Change Humanity." The article discusses how far brain implants have come, and the capability of future technology. Dr. Kirsch shares an insight on the BrainGate project, and how the next step is to restore sensation.

About the FES Center

The Cleveland FES Center is a consortium of the Louis Stokes Cleveland VA Medical Center, MetroHealth Medical Center, Case Western Reserve University, University Hospitals, and the Cleveland Clinic Neurological Institute. With their support, researchers, engineers and clinicians collaborate together to develop innovative solutions that improve the quality of life of individuals with neurological or other muscular skeletal impairments. Through the use of neurostimulation and neuromodulation research and applications, the Cleveland FES Center leads the translation of this technology into clinical deployment.
